FEATURES & BENEFITS

- This aluminium profile is thicker and more robust than our standard profiles, making it ideal for larger commercial and industrial installations. With 20mm internal width it is even capable of housing two of our standard width LED strips side by side.
- These Recessed Flat Aluminium Channels allow for a flush install into grooves or furniture pieces. They also work as a heat sink, which aids the LEDs lifespan as well as slowing down any brightness degradation over time.
- Suitable for both dry and damp locations.
- Available in bespoke lengths.
